✅ CSE0001 Digital Literacy Project

Name: NEELAVI BHATTACHARJEE
Reg No.: 25BOE10049
Branch: B.Tech (**Bio Engineering**)
Year: 1st Year
Course Code: CSE0001
Course Title: Digital Literacy
Date: 29/3/2026

📘 INTRODUCTION

In today's digital world, having strong digital literacy skills is essential for students to succeed academically and professionally. This project was completed as part of the role of a Student Digital Ambassador, where the goal was to help peers understand and navigate the digital environment effectively. The project includes tasks such as creating awareness about digital literacy, building a professional online presence, exploring coding and collaboration platforms, understanding email etiquette, and learning about cybercrime prevention. Each task provided practical exposure to tools and platforms that are commonly used in education and industry. Through this project, I developed a deeper understanding of responsible digital behaviour, online communication, and cybersecurity awareness, which will be beneficial throughout my academic journey and future career.

🎨 TASK 1 - PRESENTATION

For this task, I created a digital literacy awareness infographic using Canva. The infographic highlights the meaning of digital literacy, important digital tools for students, and safe internet practices. It explains how digital literacy involves not just using technology but also understanding how to use it responsibly and effectively. I included examples such as Google Workspace, GitHub, and LinkedIn as useful tools for students. Additionally, I added safety tips like avoiding suspicious links, using strong passwords, and protecting personal information online.

The design uses simple icons, bright colours, and short text to make the information easy to understand and visually appealing. One challenge I faced was organizing all the information into a single page without making it look cluttered. However, I learned how to prioritize important points and use design elements effectively. This task helped me understand how to communicate information visually and creatively.

💼 TASK 2 - PORTFOLIO

In this task, I created accounts on GitHub, LinkedIn, and Kaggle to build my digital portfolio. Each platform has its own importance. GitHub is used for storing and sharing coding projects, LinkedIn helps in building a professional network, and Kaggle is useful for learning data science and practicing problems.

On GitHub, I created a profile README that includes my name, branch, and my learning goals. On LinkedIn, I added my education details such as my college name and degree. These platforms will help me showcase my skills and projects in the future.

Over the next four years, I plan to use GitHub to upload my projects, LinkedIn to connect with professionals, and Kaggle to improve my technical skills. This task helped me understand the importance of having a professional online presence from the beginning of my career.

💻 TASK 3 - PLATFORMS

For this task, I used HackerRank for coding practice and Google Forms for collaboration. On HackerRank, I completed a beginner-level problem called “Solve Me First,” which helped me understand basic input-output operations in programming.

In the second part, I created a Google Form titled “Digital Literacy Awareness Quiz.” It contains five questions, including multiple-choice and short-answer questions. The form is designed to test students’ understanding of digital literacy concepts such as online safety and digital tools. I also linked the responses to a Google Sheet to analyse the results.

This task helped me explore platforms that are useful for both learning and collaboration. HackerRank improved my coding confidence, while Google Forms showed me how to collect and analyse data efficiently. These tools will be very useful in academics, especially for assignments, quizzes, and teamwork.

✉️ TASK 4 – EMAIL ETIQUETTE

Poor digital communication can create misunderstandings and leave a negative impression. For example, if a student sends an email to a professor without a proper subject line or greeting, it may appear disrespectful or unclear. In such situations, using proper email etiquette like a clear subject, polite tone, and structured message is important.

Through this task, I learned how to write professional emails and communicate effectively. I also understood the importance of maintaining a respectful and responsible online presence. Following proper communication guidelines can help avoid confusion and build a positive impression in academic and professional environments.

🔐 TASK 5 – CYBERCRIME AWARENESS

While researching cybercrime, I was surprised to learn how easily people fall victim to phishing attacks. Many scams look very genuine and can trick even educated users. I realized that lack of awareness is one of the biggest reasons behind such incidents.

As a result, I will be more cautious while clicking on links and sharing personal information online. I will also ensure that I verify sources before trusting any message or email. This task made me more aware of online threats and the importance of practicing safe digital habits.

📄 CONCLUSION

This project provided valuable insights into digital literacy and its importance in everyday life. I learned how to use various digital tools, build a professional online presence, communicate effectively, and stay safe online. Each task helped me develop practical skills that will be useful in academics and future career opportunities. Overall, this project enhanced my awareness of responsible digital behaviour and prepared me to guide others as a Digital Ambassador.
